RT-602

Zero Trust Endpoint Protection

The RT-602 is used to connect users to your remote desktop with maximum security. The RT-602 boots a signed operating system with Secureboot. Thanks to write protection and encrypted firmware packages, the target configuration is recreated with every boot. The RT-602 is also equipped for two-factor access via USB stick (alternatively smart card or RFID token) with password protection, so that user authentication can be carried out with maximum password security. The device can communicate with the TCMS via TCMS VPN (licence included) and can be connected to a remote desktop infrastructure via the TCMS. The RT-602 comes with a seven-year warranty and software support.

We make no compromises when it comes to quality and security.
