

RT-603

Zero Trust Endpoint Protection

The RT-603 offers users maximum security when connecting to remote desktops. The RT-603 boots using Secure Boot with a signed operating system. Thanks to write protection and encrypted firmware packages, the operating system is restored on every boot and reproduced identically each time. The compact device is fanless and has no moving parts. This makes it suitable for office environments as well as for harsh environments in production and logistics.

We make no compromises when it comes to quality and security.
